Inhibition of migration of vascular smooth muscle cells induced by bile acids via caveolin-1 and Rho-dependent actin rearrangements.

Hyperlipidemia is linked to a variety of cardiovascular disorders, in which the accumulation of cholesterol in the arterial wall is thought to be an important factor. Several lines of evidence suggest that bile acids, major components of the hyperlipidemia, play an important role in the pathogenesis of cardiovascular diseases. In this study, we examined the inhibitory effect of bile acids, including chenodeoxycholic acid and

deoxycholic acid, on the migration of vascular smooth muscle cells (VSMCs). As bile acid concentrations in plasma are mostly in the physiologic range, effects of these bile acids on VSMC migration were examined at concentrations ranging from 10^{-6}
